

EXPERIENCE

Software Engineer, Sony

JAN. 2024 - PRESENT

- Led development of BACH, a platform that allows media teams to easily provision promotional content to over 8 million Sony BRAVIA TVs worldwide.
- Expanded SUMO, Sony's global TV update distribution platform, increasing the managed device base 30% by adding support for legacy TVs. Built SSO login using OAuth and AWS Cognito.
- Built user-facing UIs with Vue & TypeScript and architected REST APIs with Go & PostgreSQL.
- Extensively leveraged AWS CDK and GitHub Actions to deploy scalable infrastructure at enterprise scale.

Software Engineer Intern, Sony

JULY 2023 - DEC. 2023

- Built in-house URL redirect service with Python & AWS CDK and integrated it to a Splunk dashboard, allowing devs to view aggregated analytics for customer QR code scans across TVs, Best Buy showcases, manuals, etc.
- Established CI/CD pipelines with automated testing strategies and manual approval stages to ensure quality.
- Developed and maintained unit and integration tests, strengthening system reliability.

Computer Science Tutor, UCSD

JAN. 2023 - JUNE 2023

- Tutored >200 students on Java, object-oriented design patterns, unit testing, and team software dev. concepts (e.g. Agile, Git, CI/CD) for CSE 110 Software Development. Achieved 100% student recommendation rate.
- Tutored >250 students on algorithms, data structures, dynamic programming, and time complexity analysis for CSE 101 Algorithm Design & Analysis. Achieved 100% student recommendation rate.

Software Engineer Intern, KSDT

OCT. 2021 - SEPT. 2022

- Created React web app that provided an authenticated platform for users to easily book and schedule rooms in KSDT, replacing an insecure Google Calendar system. Used MongoDB/Express/React.js/Node.js stack.
- Streamlined devops by introducing Agile methodologies with tools like Jira, Trello, and Notion.

EDUCATION

University of California, San Diego

SEPT. 2019 - JUNE 2023

- B.S. in Computer Science. Graduated *cum laude* (GPA: 3.85/4.0).

SELECTED PROJECTS

Easy Street - Shopping with Visual Discovery

- Built Chrome extension that augmented the shopping experience by finding visually similar items on product webpages, extracting their price/size/color/etc., and conveniently collating them into a filterable and sortable list for the user.
- Used React to develop UI, JavaScript for content scripts, Python for Flask API and AI image processing.

Labyrinth - Accessible Navigator

- Winner of IEEE's 'Most Technical' award at their UCSD WI22 project showcase.
- Developed mobile app for Android that live-converts navigational directions into a series of coded device vibrations for the user. Created due to user accessibility concerns with existing navigation apps. Built with Java and Android Studio.

TOOLS

- **Programming Languages:** TypeScript, Go, JavaScript, Go, Python, Java, HTML, CSS, SQL
- **Frameworks/Databases:** Vue.js, React, Node.js, Flask, S3, PostgreSQL, MySQL, DynamoDB, MongoDB
- **Tools:** Git, GitHub, AWS, AWS CDK, Docker, Splunk

SKILLS

- **Skills:** Full-stack software development, system design, data structures & algorithms, AI, object-oriented programming, infrastructure as code (IaC), data processing, CI/CD, unit testing, SQL/NoSQL DBs, Agile
- **Languages:** English, Mandarin, French
